

ZL CODE T ULTRA PE BLACK LAMINATES

Great performance on beam/broad reach courses

➔ *Designed for radial cut sails*

The ZL Code T Ultra PE Black Laminates are tailored to performance-oriented cruisers and are offered in three weight options. This laminate range utilizes UPE warp fibers in conjunction with a polyester cross-ply and a 50x50 taffeta weave.

The inclusion of UPE warp fibers imparts a notable durability and shape-holding capability to the cloth, making it a well-suited choice for cruisers seeking improved downwind performance. The integration of a 50x50 taffeta fabric further enhances the design, offering a soft and comfortable hand, while a PET cross-ply construction reinforces tear resistance, adding a measure of longevity and reliability.
